

Widget Integration Guide

Step-by-step technical integration

Quick Start

Integrate the Daily Event Insurance widget on your website in 3 simple steps. No coding experience required for basic integration.

Step 1: Get Your Partner Code

1. Log in to your partner dashboard at partners.dailyeventinsurance.com
2. Navigate to Settings > Integration
3. Copy your unique partner ID (format: PARTNER-XXXX-XXXX)

Step 2: Add the Widget Script

Add this code snippet just before the closing `</body>` tag on your website:

```
<script src="https://widget.dailyeventinsurance.com/v2/embed.js"
  data-partner-id="YOUR-PARTNER-ID"
  data-theme="auto"></script>
```

Step 3: Configure Display Options

Option	Values	Description
data-theme	auto, light, dark	Widget color scheme
data-position	inline, modal, sidebar	How widget displays
data-lang	en, es, fr	Language preference
data-button-text	Custom text	CTA button label

React/Next.js Integration

For React-based applications, use our official NPM package:

```
npm install @dailyeventinsurance/react-widget
```

Then import and use the component:

```
import { InsuranceWidget } from '@dailyeventinsurance/react-widget';

<InsuranceWidget
  partnerId="YOUR-PARTNER-ID"
  onPurchase={(policy) => console.log(policy)} />
```

Testing Your Integration

- Use data-env="sandbox" for testing without real transactions
- Test purchases appear in your dashboard under "Test Transactions"
- Switch to data-env="production" when ready to go live
